

FOR IMMEDIATE RELEASE

DEL Ozone Absorbs NESC's On-Premise Laundry Division

January 21, 2010 (San Luis Obispo, CA): DEL Ozone, a worldwide leader in ozone sanitization technology, announces that it has absorbed the commercial on-premise laundry (OPL) unit of the National Energy Services Company, Inc (NESC). With this integration, DEL Ozone will strengthen its focus on helping OPL operators realize measurable energy savings through hot water reduction using DEL's proven sanitization technology. Former NESC executives and industry veterans John Grillo and Rusty Gramiak will head up the on-premise laundry division for DEL.

The integration of NESC's on-premise laundry team positions DEL Ozone to serve a growing demand from OPL operators for energy efficient and cost saving solutions.

The commercial on-premise laundry team, led by John Grillo, former president of NESC, and Rusty Gramiak, former vice president of operations at NESC, will work with OPL operators in key industries such as hospitality and long term care. Grillo and Gramiak bring combined experience of over 15 years in energy management and on-premise laundry operations.

In describing the newly formed relationship Grillo remarks, "NESC was a long-time partner of DEL Ozone and having successfully implemented DEL's technology in a wide range of on-premise laundry systems, there is no better place for this unit to have landed"

President of DEL Ozone, Dennis Lavelle adds, "OPL operators finally have a source for turnkey ozone solutions that result in energy savings backed by a full-service customer support program."

DEL Ozone offers a variety of corona discharge ozone generators for water purification and has recently launched a new system, DEL Clean, designed specifically for the high demands of on-premise laundry. DEL Clean reduces hot water usage and lessens the need for chemicals by safely and effectively eliminating bacteria, viruses, blood pathogens, and other microorganisms while maintaining linen quality. Certain wash cycles can also be eliminated or reduced with ozone serving as a powerful sanitizing agent.

To assist in ozone implementation for OPL, DEL Ozone consultants provide site assessments, energy savings analysis, complete installation, post-installation reporting, and ongoing customer support.
