

WHAT IS OZONE?

Ozone is a highly powerful and effective water sanitizer that destroys harmful microorganisms and dangerous pathogens, such as *Cryptosporidium*. Scientifically speaking, ozone is a form of oxygen that is created when electrical energy breaks apart an oxygen molecule (O₂), which effectively results in the creation of ozone (O₃).

WHAT ARE THE BENEFITS OF OZONE?

- ✓ *Destroys bacteria, viruses, and other harmful contaminants*
- ✓ *Stronger than chlorine and reduces chemical use by 60-90%*
- ✓ *Environmentally friendly and energy efficient operation*
- ✓ *Does not produce unpleasant chemical odors*
- ✓ *Will not cause painful skin or eye irritations*
- ✓ *Swimwear will not degrade as quickly*
- ✓ *Only by-product is oxygen*

Did You Know?

Ozone is used to purify bottled drinking water.
